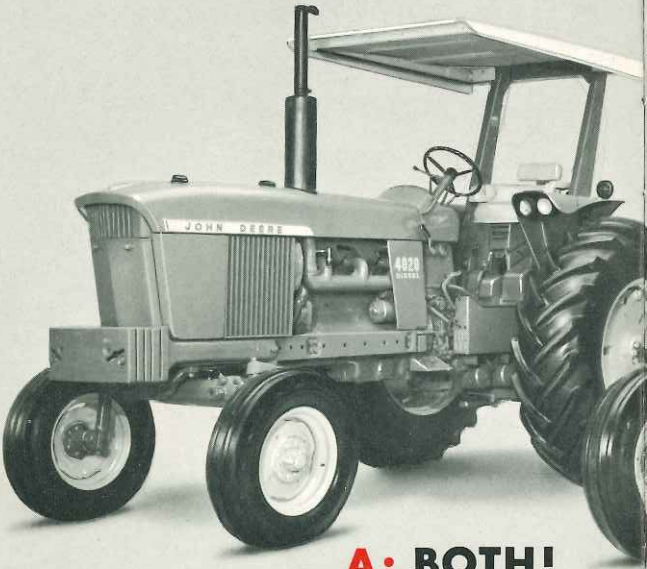
Leave your tractor-driving safety to this question

Q: Which tractor has a



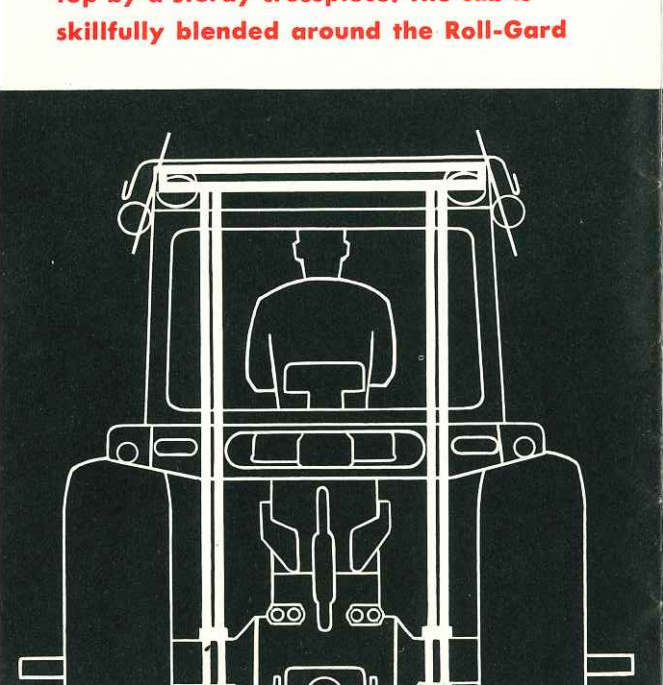
A: BOTH!

It's easy to spot the John Deere Roll-Gard on the "4020" at the left. The other "4020" is also Roll-Gard equipped—and offers you the added protection of a new, fully enclosed John Deere Cab. Now, you can face the elements and the possibility of a tractor tip with far greater confidence.

John Deere Roll-Gard?

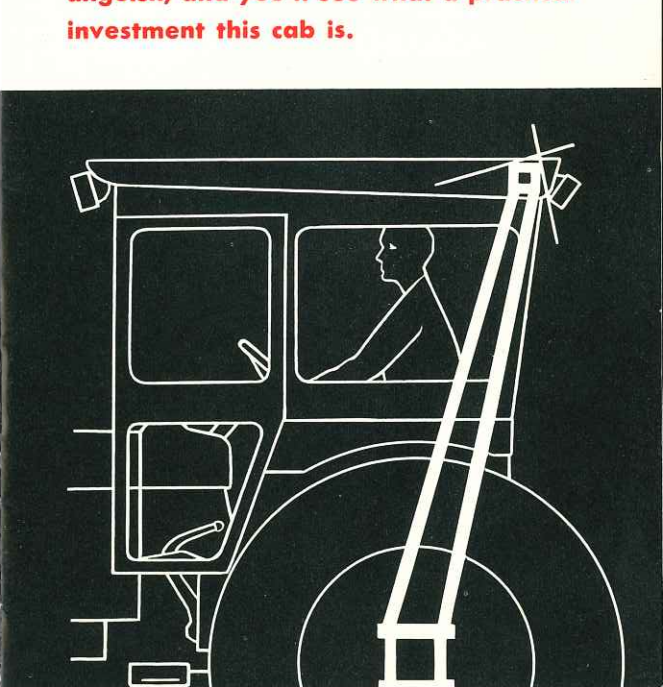
Comfort and safety go hand in hand when you invest in this new cab. It's modern, functional, quality built, loaded with extra-value features. Read the following pages, then see your John Deere dealer for full details on the more enjoyable farming that awaits you inside a John Deere Cab.

You're surrounded in a protective steel frame when your "2510," "3020," "4020," or "5020" Tractor is equipped with this new John Deere Cab. As diagramed below, the Roll-Gard, pioneered by John Deere in 1966, consists of two uprights firmly fixed to the rear-axle housing and joined at the top by a sturdy crosspiece. The cab is skillfully blended around the Roll-Gard



and onto the tractor. It looks good!

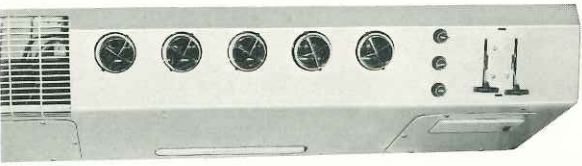
In the event of a tipover, the Roll-Gard is designed to limit roll to 90 degrees in any direction. Diagonal lines indicate the ground line. By tipping this booklet, you can see how Roll-Gard works to prevent a 180-degree rollover. Consider injury, death, and family anguish, and you'll see what a practical investment this cab is.



You'll work in a controlled environment, mastering rain, snow, sun, wind, dust, cold, and heat. Despite what the calendar reads, you have the pleasure of "calling" the season to your liking.

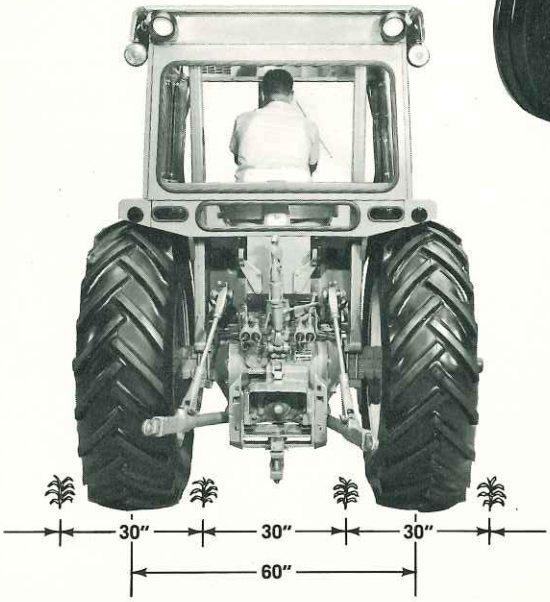
This new John Deere Cab fits the tractor snugly to keep cold drafts, sifting snow, and moisture outside where they belong. A hot-water heater is available to permit you to work in coatless comfort while the weather howls outside. This heater also features a defroster which keeps the front window ice- and fog-free.

The expansive roof and tinted glass hold the heat and glaring rays of the sun at bay. In warm weather, the rear and right side window can be opened to provide cooling cross ventilation, as shown below. The door can also be left open in one of two fixed positions or removed entirely.



Pressurizer is regularly furnished . . . keeps out dirt and dust. This pressurizer is just one of many extra-value features. It delivers a high volume of filtered fresh air into the cab . . . pressurizing the cab to keep dirt and dust out so that you enjoy cleaner working conditions. Louvers can be adjusted to direct air where you want it and chances are that in hot weather, you'll keep the cab closed and utilize the pressurizer as a fan.

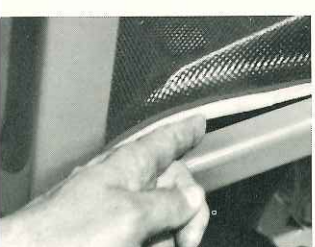
This cab enables you to work in 30-inch rows. A 60-inch rear-wheel tread is a must for working in 30-inch rows. While not all tractor cabs make this provision, the new John Deere Cab does . . . and without any sacrifice in either platform size or room inside. It's accomplished by angling the lower part of the cab inward as shown at right. Tires of any size capable of fitting into 30-inch rows can then be spaced to a 60-inch tread as shown below.



Your working view is excellent in all directions. It's easy to follow a row or a furrow with this new cab. Large window areas provide a clear full-circle view. Corner posts are narrow to reduce blind spots. Large front ports on both sides enable you to see the front wheels at all times. The lower window on the door is ideal for working in row crops. This excellent view contributes directly to better work.

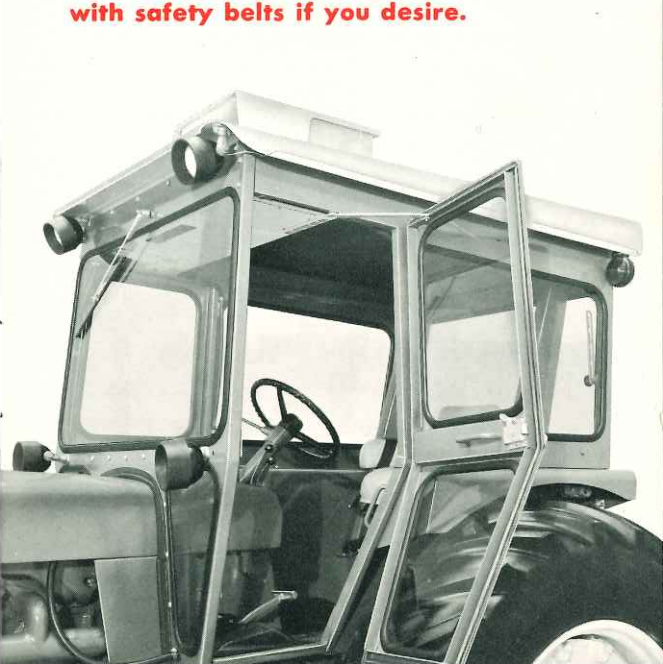
Extra value, extra quality are regular equipment. An impressive array of deluxe features is regularly furnished. The pressurizer has already been covered; this view shows the large filter that draws in air from its relatively dust-free rooftop location. Large areas of tinted glass, tempered to resist shock, protect you from glare. A wide-sweep electric windshield wiper is also standard equipment. Sturdy fenders are an integral part of the cab.

Complete Lighting. Excellent and complete lighting is provided for field and highway operation. Up front, four front lights are carefully placed. The lower lights project powerful beams ahead of the tractor; the upper lights are equipped with special lens to flood the work area without reflective glare from the hood. At the rear, two white field and two red taillights plus two warning lights are provided. As a final quality touch, a dome light is provided inside the cab. Note the rear port that aids in lining up implement attaching points.



Every provision is made to keep noise down. Noise, a prime source of early fatigue, is held to a minimum in this new cab. Thick wall-to-wall padding covers the entire platform (left). The entire ceiling is also padded with heavy acoustical material (right) to deaden sound. Windows are framed in rubber to prevent rattle, and rubber-lining at points of contact between the tractor and cab reduces vibration. The result is a quieter, more pleasant atmosphere in which to work, and an ability to work longer hours and accomplish more without excessive fatigue.

Entry is easy through a wide-swing door from the left side. Sturdy step and conveniently located handholds stand by to help you board. The mounting area is open and uncluttered; even a large man can move in with ease. The tractor can be operated with the door secured in this position, closed to 60 degrees, or removed altogether with little effort. Inside awaits the most comfortable seat available on any farm tractor, a seat which can be equipped with safety belts if you desire.



It's lots nicer inside a John Deere Tractor Cab. Safety, protection from the elements, the pleasure of working in a controllable environment—however you view this new John Deere Cab, it's a good investment in more-enjoyable farming. In adverse weather, you'll be out producing. In rush periods, you'll be fresh enough to put in those extra-profit

hours. This is a cab that can pay for itself both in terms of pleasure and profit. Your John Deere dealer has full details; stop in and learn how you can obtain a new cab for your John Deere Tractor. Ask about his credit plan.
